Title:
The Relationship Between Sexual Satisfaction and mental health the study of quality of life and marital satisfaction in married women

Abstract:
The purpose of this study was to investigate the relationship between sexual satisfaction, mental health, quality of life and marital satisfaction in married women. Study method was correlation, and the population including women referred to the number 4 of health center in Khomeini city. Sampling method was randomized, and statistical sample was 160 people that responded sexual satisfaction, mental health, quality of life, and marital satisfaction questionnaires. Data were analyzed by path analysis and SPSS-20. Simple correlation findings indicated that sexual satisfaction with quality of life and marital satisfaction had positive and significant relationships. Path analysis showed that sexual satisfaction to mental health, quality of life and marital satisfaction paths were significant and marital satisfaction increased quality of life and quality of life resulted in mental health. But marital satisfaction to mental health wasn't significant.
